

ABSTRACT OF THE INVENTION

A collapsible refuse can includes a can body, a bottom, a cap, a pedal and a cap opening member and plural bag hangers. The can body consists of two half
5 shells combined by means of elongate hooks, with the bottom fitted firmly in a lower open side with an open upper side closed with a cap possible to be opened by the cap opening member, when the cap opening member is lifted up by the pedal stepped down. And a refuse bag is
10 secured on an upper inner surface of the can body by means of the plural bag hangers. Then the collapsible refuse can has a small size when collapsed, beneficial for carrying, transporting and storing.
